

Open Source Developers Community

Introduction To Open Source

About Us

Who are we?

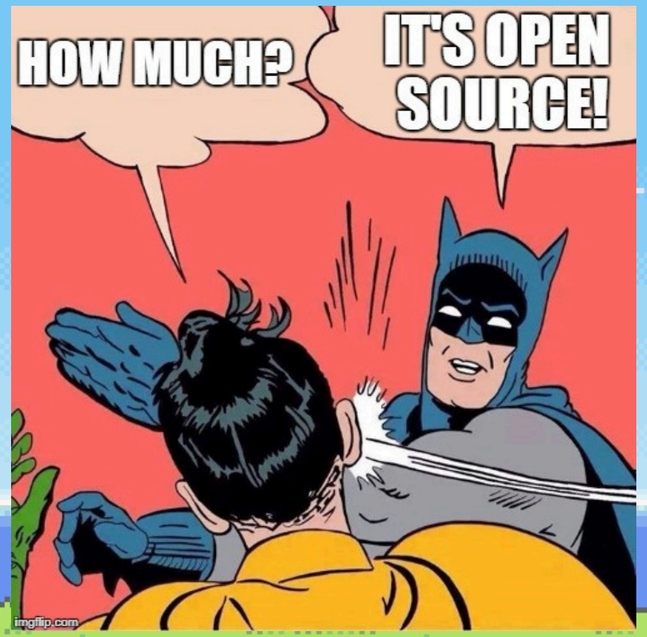

A Community of Web Developers , Linux Enthusiasts, Android and Machine Learning Folks, Designers, and most significantly, Curious Explorers.

What do we aim to do?

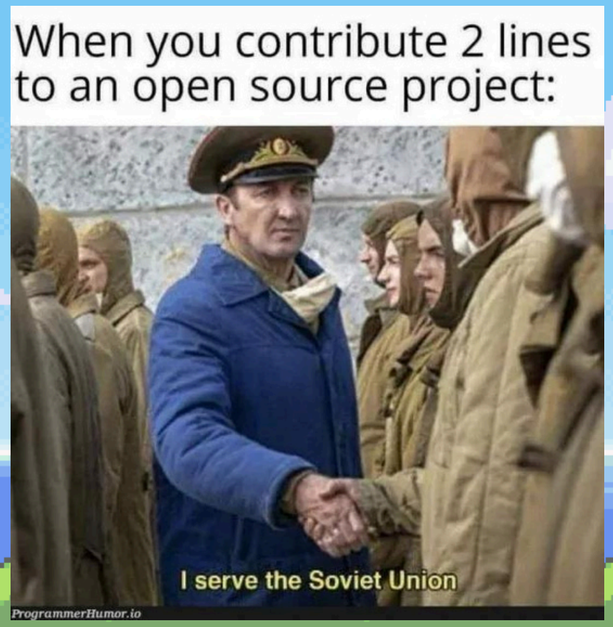

- Helping Each Other
- Contributing To The Society
- Keeping The Spirit Of Open Source Alive

What is Open Source

The term open source refers to something people can modify and share because its design is publicly accessible.

Why Open Source

- Learn by building
- Work with cool people
- Make a difference
- Make meaningful connections

Version Control System

Version control is a system that records changes to a file or set of files over time so that you can recall specific versions late.
It allows you to revert selected files back to a previous state, revert the entire project back to a previous state, compare changes over time, see who last modified something that might be causing a problem, who introduced an issue and when, and more.

git and github

Git is a version control system that manages and keeps track of your code. GitHub, on the other hand, is a service that let you host, share, and manage your code files on the internet.

Where To Find Us

links.osdc.dev

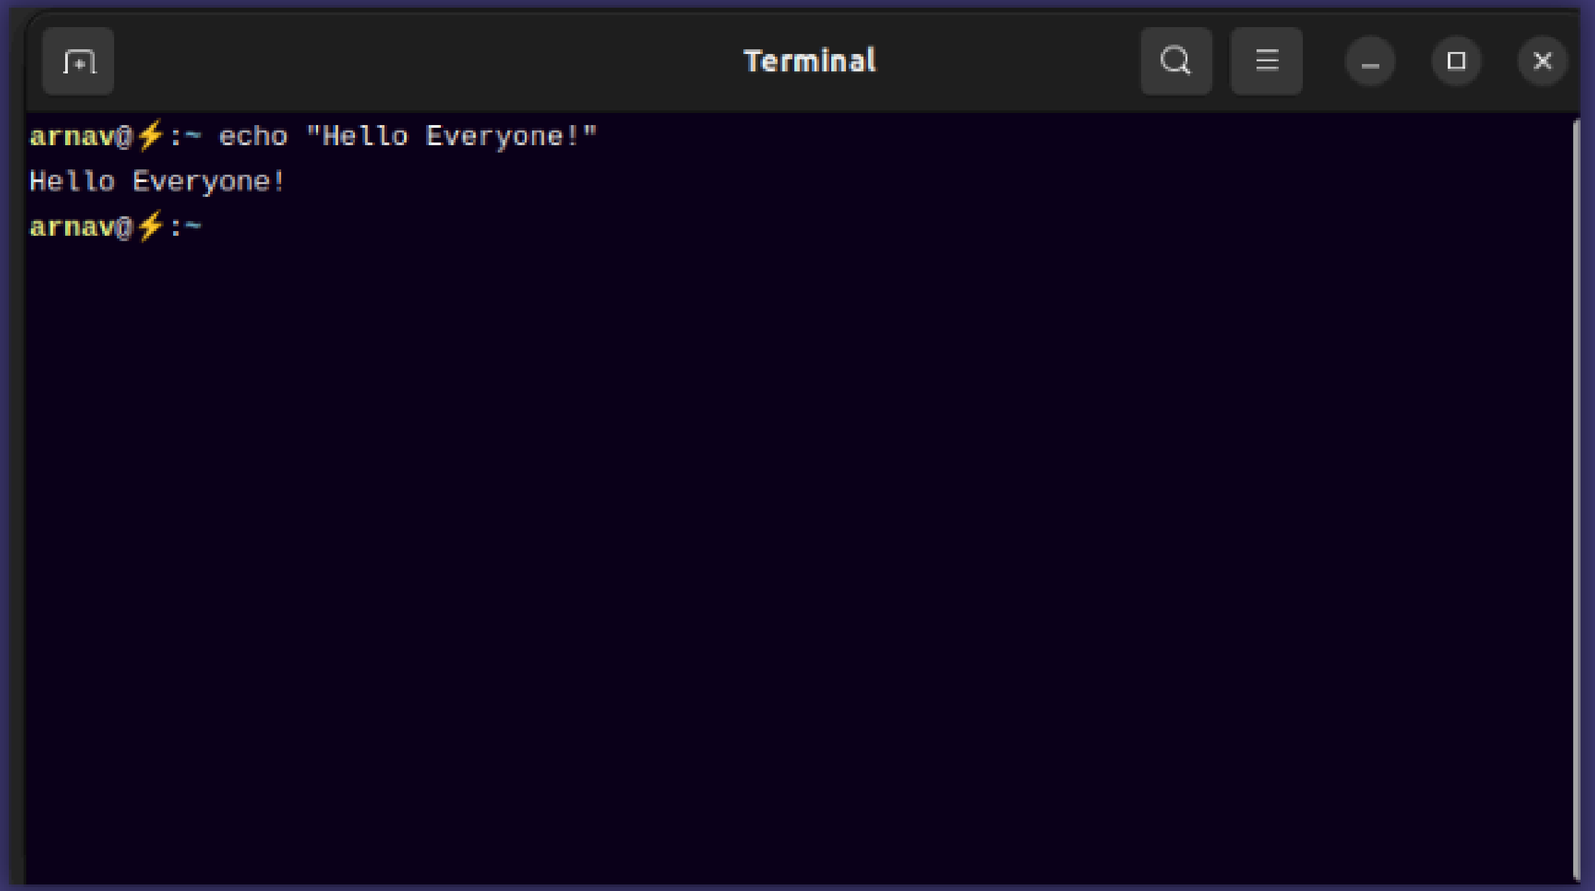

GAMEBOY ADVANCED

The Terminal

(Coder's Best Friend)

Navigating Through The OS

$: pwd ---------- Print Working Directory

$: ls ----------List Contents

$: mkdir ---------Make Directory

$: cd ---------- Change Directory

$: touch <file> --- Make A New File

$: code/nano --- Code!

$: cat <file> -----Display Contents

Gitting Started with Get

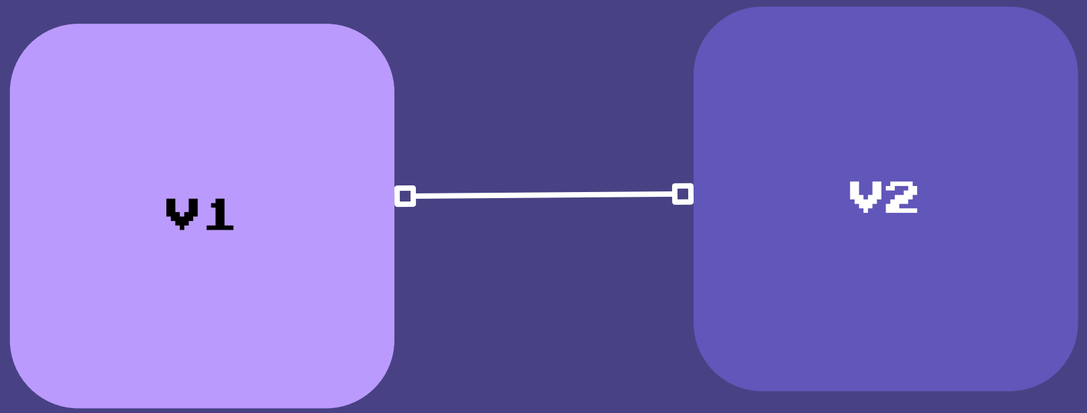

I misspelled it again right?

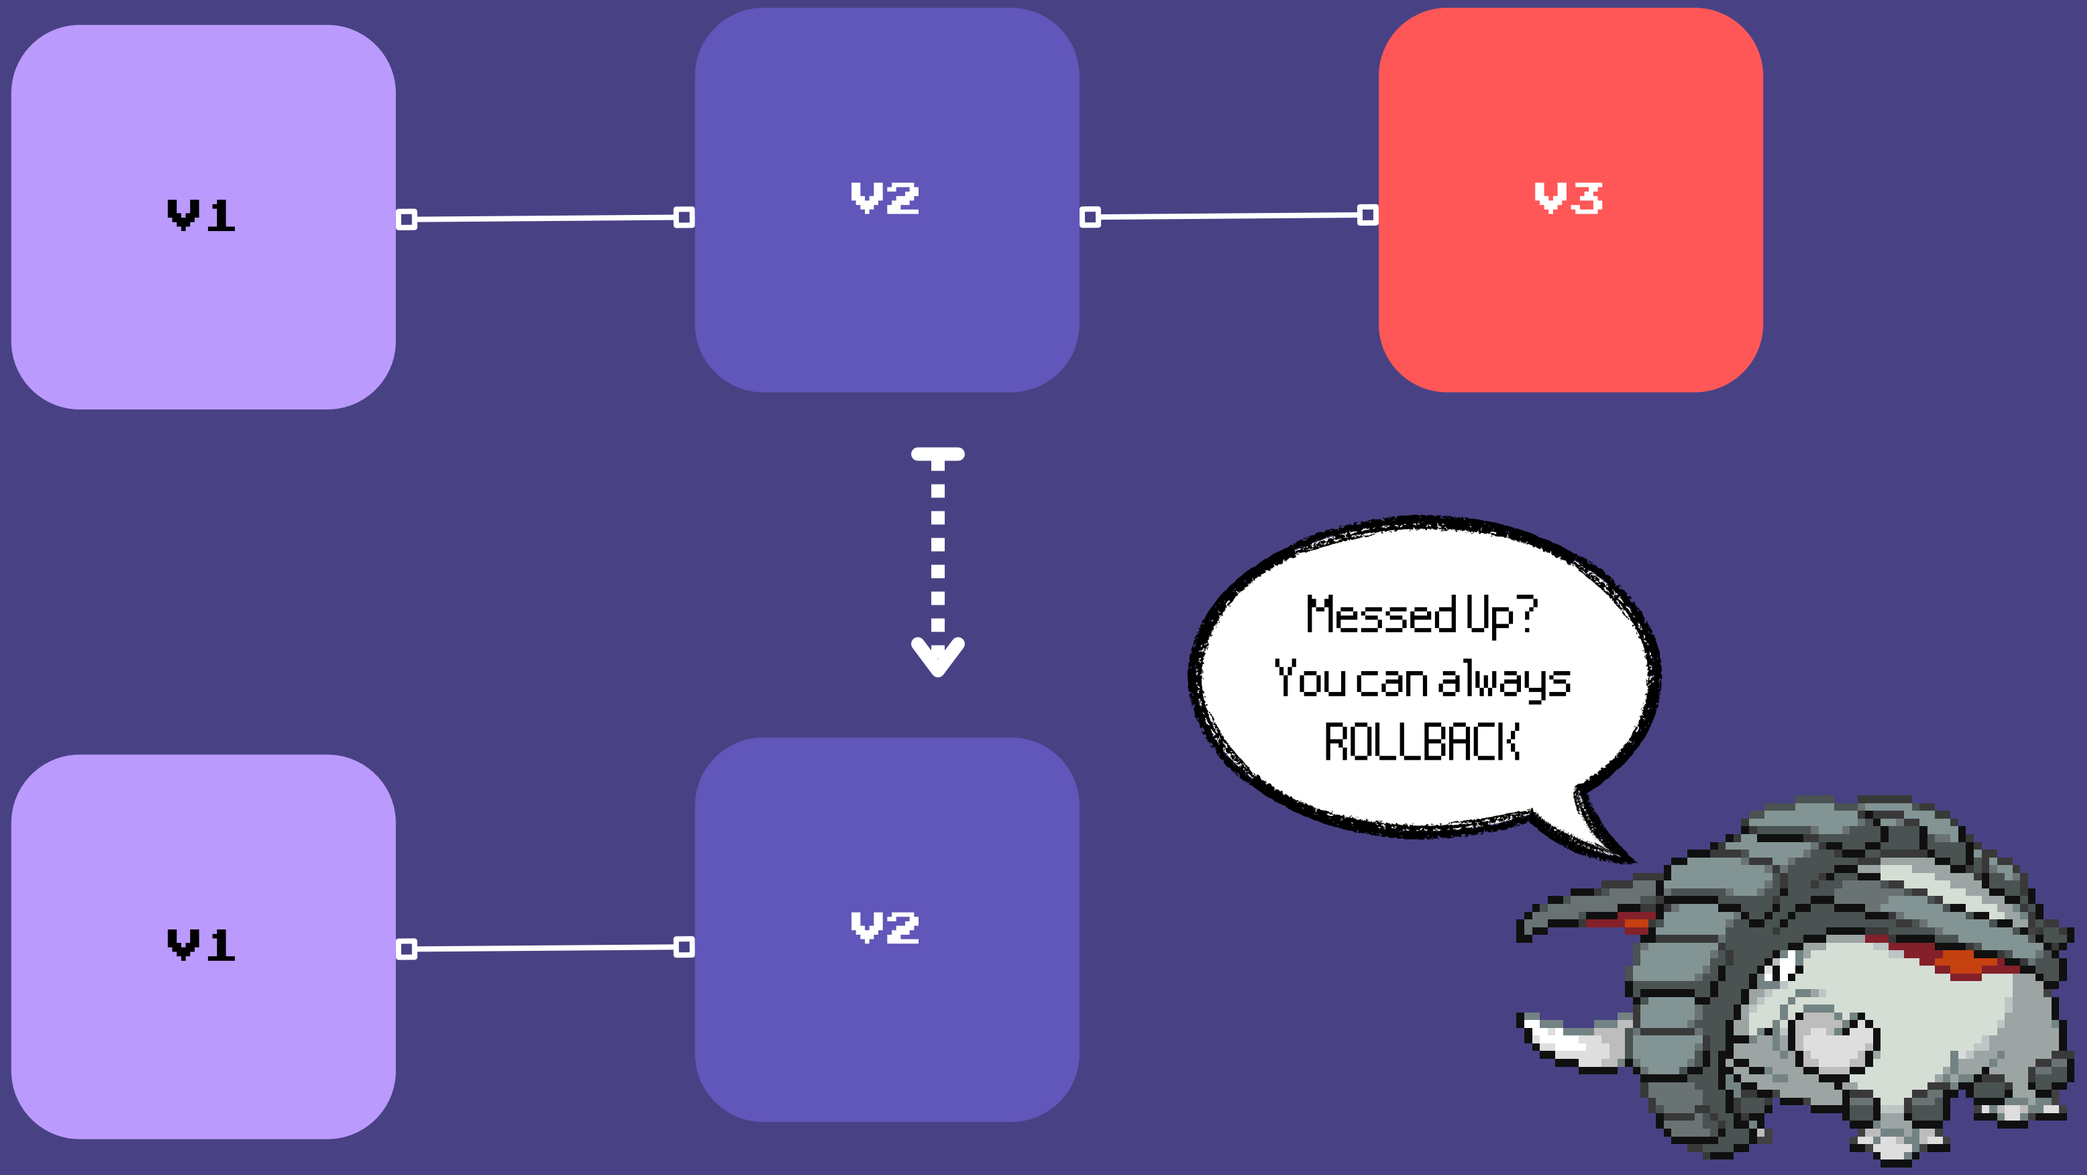

Wait, but what and...why?

VERSION CONTROL SYSTEM

v2
Messed Up?
You can always
ROLLBACK

POWERS OF A VSC

Collaborate without chaos

Recover from mistakes easily (like an undo button)

Track history of changes, for transparency and accountability

LETS TALK GIT

Used by most OS Projects and companies.

The reason is simple:

Git is fast, flexible, and allows teams to work together efficiently."

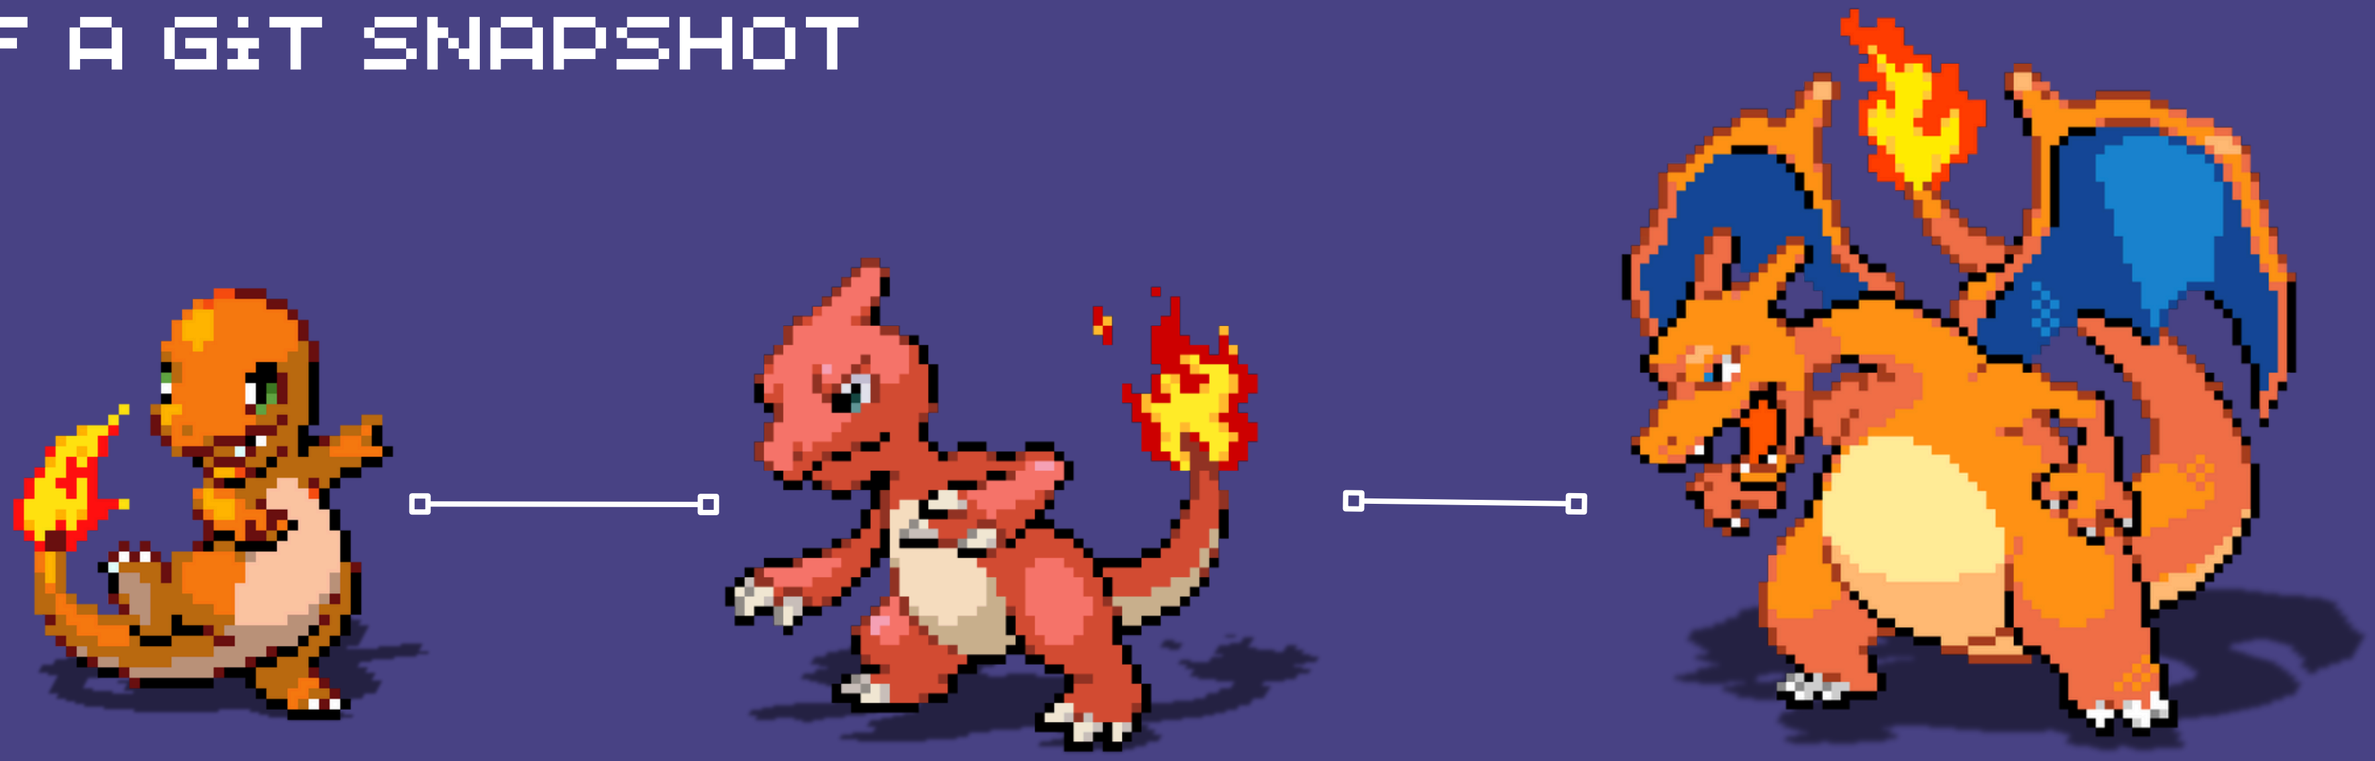

```
git --version

git config --global user.name "Your Name"

git config --global user.email "Your Email"
```

THE 3 STAGES OF EVOLUTION

OF A GIT SNAPSHOT

Change is Made

Change is Tracked

Change is Commited

This is how we commit ...in git

```
git init
git status
git add <stuff>
git commit -m “<Words>”
git log
.gitignore
```

How to UNDO your Sins

```
git reset --hard HEAD~1
git reset --soft HEAD~1
git reset --hard <hash>
git reset --soft <hash>
```

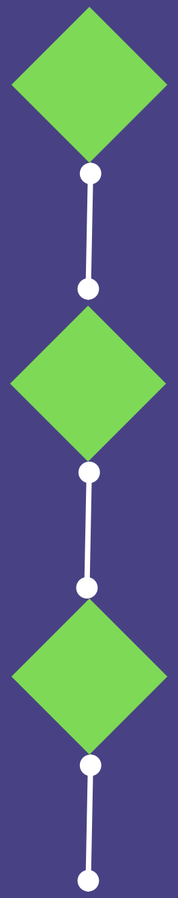

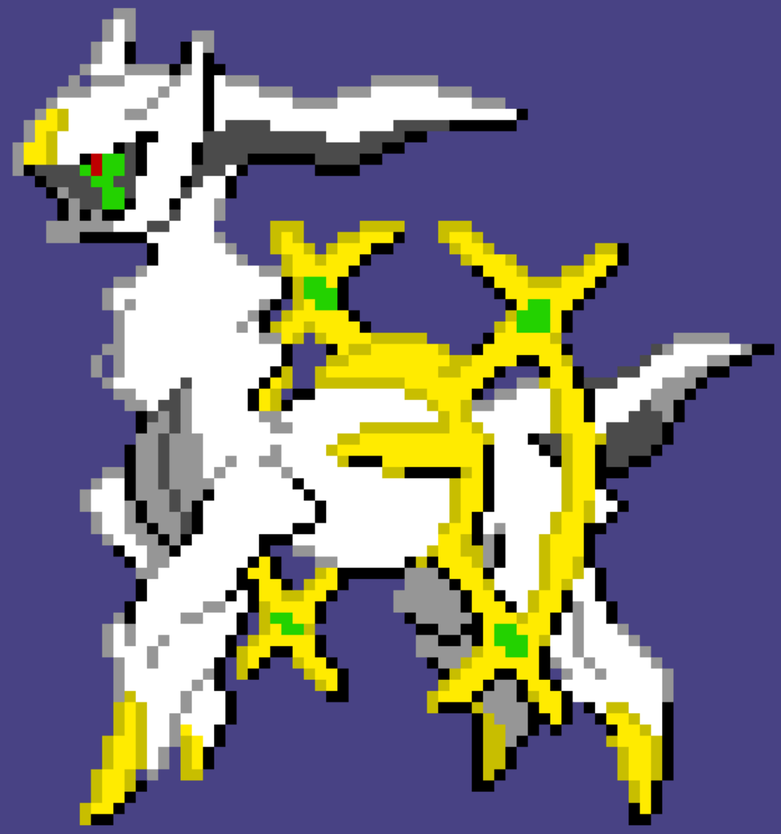

BRANCHING

CREATING REALITIES

(FT ARCEUS) Kinda like the CEO,

Of the Universe

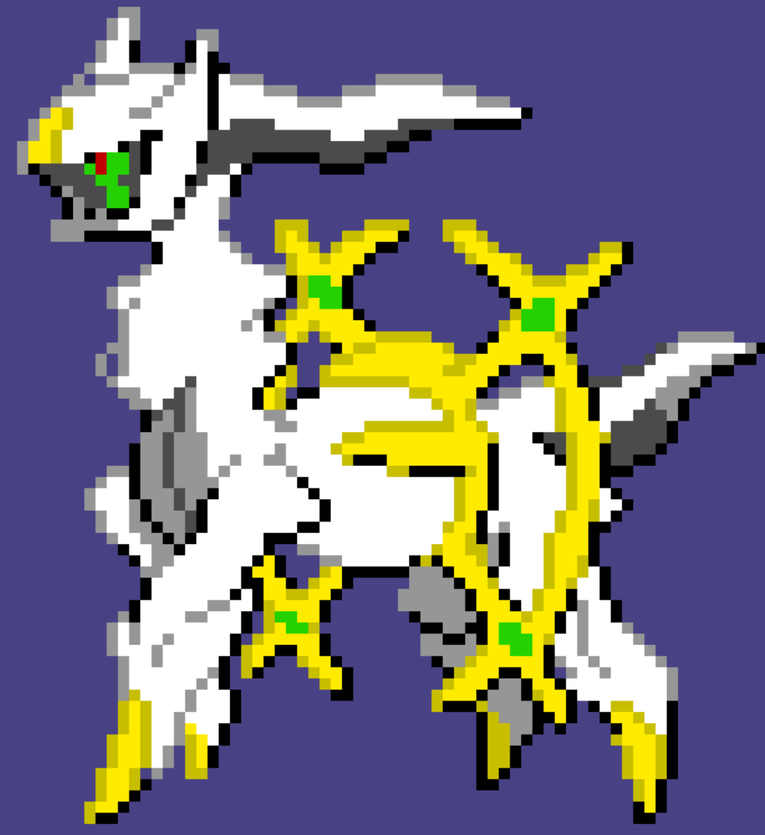

v1 → v2

Constructing Realities

git branch

git checkout

git merge

GITHUB Ft. TheInternet

LETS PUT YOUR REPO ONLINE

1
Make A GH ACCount

2
Authenticate

3
Create a new repository

4
Link it to your local repo

5
PUSH!

SSH

wut ? uses?

A remote route via which we can

transfer our codes on github or any VCS

Didn't understand ? Let's work on it

SSH Authentication

```
ssh-keygen -t ed25519 -C "your_email@example.com"
```

>> Go To Your SSH Path (cd.\.ssh\)

>> Generate the PubKey using :

```
cat id_ed25519.pub
```

COPY THIS STUFF

Open github -> settings -> ssh & gpg ->
add-key -> paste the key

Putting It Online

```
git remote add origin <repo>
```

```
git branch -M main
```

```
git push -u origin main
```

Forking And Cloning

git clone pikachu

Forking And Cloning

Forking And Cloning

SSH Authentication

in the command line start hitting these :

git remote add origin git@github.com:name/pokedc.git

git fetch origin

add github integration by clicking yes

git add .

git commit -m "Your commit message"

git push origin main

Lets try it!
